

GBE-N Continues to Build Delivery Team for First SMRs

2.4.2026 - | Her Majesty's Revenue and Customs

GBE-N continue to make progress in building a strong team which will deliver the UK's first SMRs.

In the first quarter of 2026, Great British Energy - Nuclear (GBE-N) has continued to make great strides in building the team which will deliver the UK's first SMRs.

This is part of intense commercial activity to scope, procure and award multi-million-pound contracts for the nuclear supply chain, including:

- Owner's Engineer, awarded to Litmus Nuclear - a Joint Venture between Amentum and Cavendish Nuclear, valued at up to £300m
- Environmental Services and Permitting for Wylfa, awarded to WSP and Mott MacDonald, made up of two contracts worth up to £25m and £6.6m respectively
- Foundation Engineering, awarded to Arup, with support from Costain, LDA Design, TÜV SÜD Nuclear Technologies, Mace and Gleeds, valued at up to £19.5m
- Property and Land Management, awarded to Fisher German, valued at up to £2.55m.

The combined value of these contracts is up to £353.65m.

GBE-N will also be signing contracts with its preferred technology provider, Rolls-Royce SMR, in due course.

Marking this moment, GBE-N Chief Executive, Simon Roddy, said:

"Our mission is clear, to deliver new nuclear in the UK at pace. We're determined to realise the full potential of the nuclear programme, and the evidence over the past three months alone shows that we're making tangible progress."

About GBE-N

Great British Energy - Nuclear (GBE-N) is the government delivery body dedicated to supporting the development and deployment of new nuclear technologies in the UK. As an arm's length body of the Department for Energy Security and Net Zero, GBE-N helps ensure long term energy security, supports net zero targets and promotes investment and innovation across the nuclear sector.
