

Try Google Pics: Easy image creation and editing in Google Workspace

1.9.2026 - Meg Whittenberger | Google Italia

Generate, refine, and co-create images with unparalleled precision. Plus, upcoming Workspace integrations will let you create and edit directly within Google Slides, Docs, and Drive.

Google Pics — our image creation and editing tool from Google Workspace — is rolling out over the coming weeks to all Google AI Pro and Ultra subscribers and most Workspace business customers.

Built on our Nano Banana image generation and editing model, Pics gives you the control you need to create whatever you're imagining, whether you're designing a poster, producing social media posts, or editing digital illustrations. Google Pics will be both a standalone product and integrated into Workspace apps, starting with Slides, Docs, and Drive, so you'll be able to edit images where you're already working.

Precise control meets ease of use

Google Pics includes a suite of fine-tuned editing capabilities that let you generate images and make precise edits rather than starting from scratch. Here are some of the features you can look forward to:

Watch how to instantly create and refine custom graphics using the powerful editing controls in Google Pics.

Easily design and fine-tune eye-catching social media content and digital announcements using Google Pics.

- Object segmentation: Pics lets you easily isolate an object and transform it without altering the rest of your image. You can input text comments on specific areas to request targeted changes and execute multiple edits at once.
- In-image text editing and translation: Modify or translate text directly inside an image without disrupting the design or changing the font.
- Collaborate with others: Share Pics creations with your friends and teammates, then collaborate to edit the same image.
- Multiple generations: Pics generates several options from a single prompt, so you can choose your favorite from a variety of iterations.

Seamless integrations with Google Workspace

Millions of users interact with billions of images across Workspace products every month. To make this experience even more seamless, we're bringing Google Pics directly into the tools you already use. You shouldn't have to jump between applications to create and share visuals. Now, you can harness powerful AI image generation and editing right where you are — no copying, pasting, or switching tabs required.

Discover how to seamlessly edit images and product mockups right inside your Workspace apps, like Slides, Docs, and soon Drive, without switching tabs.

Speed up your workflow by dropping files directly from Google Drive into Google Pics to design brand concepts.

Create anything you can imagine with Google Pics.

This integration starts today with Docs and Slides, and will roll out to Drive in the coming weeks.

We can't wait to see what you create. Try it at pics.new.
