

Gemini helps me bring hands-on learning into the classroom.

5.10.2026 - Cheryl Graff | Google Italia

Before using AI, I often struggled to bridge the gap between abstract literature concepts and true hands-on learning. Today, Gemini serves as my planning partner, helping me build classroom experiences I couldn't have easily created on my own a few years ago.

In my English classes, before we read complex stories about climate change or human rights, my students participate in global simulations. Gemini helps me quickly build multi-station role-playing challenges, letting students physically move through the room to solve problems and build empathy before opening their books. In my Life Skills courses, Gemini helps me design smoothie recipes and dietary profiles so students can blend ingredients and practice mindful nutrition firsthand.

Gemini isn't a replacement for active teaching — it's a tool that helps me bring movement and deeper engagement into my classroom.
