

We're introducing flexible usage limits for Gemini Notebook.

28.8.2026 - Yesul Shin | Google Italia

We're introducing new flexible, compute-specific usage limits to Gemini Notebook — giving you more control over your workflow.

You'll continue to have access to all the features that you use and love. This change will give you more choice over how you want to spend your limits and manage your tasks. And since limits refresh every five hours rather than daily, you can now keep working throughout the day.

To give you more control over your compute budget, your overall usage limit will factor in prompt complexity, chat length, number of sources, and the features you use. Your notebook will help you keep track of your usage and suggest alternative outputs if your first choice surpasses your limit. If you reach your limit, you can defer generating outputs like Video Overviews or Slide Decks for later. They will generate automatically and you can set up notifications so you know the moment they're ready.

These updates are rolling out to consumer accounts on web and mobile starting on September 2.
