

More than 100 startups joining our Google for Startups Gemini Startup Forum

Datum 6.10.2026
Subjekt Google Italia
Autor Darren Mowry
Region Italy
Kategorie Companies, IT, Technology

Representing 17 countries, these 100 startups are at the forefront of the AI revolution.

This November, the founders of more than 100 startups selected from over 2,000 applications will convene at Google's Mountain View headquarters for a two-day in-person summit designed to accelerate their growth.

Since the inaugural Google for Startups Gemini Startup Forum last November — launched as a collaboration between Google DeepMind and Google Cloud — founders have collaborated with experts across Google to overcome technical challenges, refine their product strategies, and scale their solutions globally. The fourth cohort of startups will join this expanding network.

Representing 17 countries from around the world, these startups are at the forefront of the AI revolution. While they tackle diverse challenges — from diagnosing genetic disorders and screening for cancer with AI to developing control systems for next-generation robotics — they share a common mission. All are using AI to create more adaptive, intelligent, and scalable solutions for the modern world.

At the Gemini Startup Forum, founders will have the opportunity to work on their AI roadmaps alongside specialists from Google DeepMind and Google Cloud. Throughout the summit, participants will hear from AI experts and leaders, receive hands-on support from the engineers behind Google's newest products, gain exclusive access to AI demos, and network with fellow founders.

Learn more about the fourth cohort on the Gemini Startup Forum page.

The Google for Startups Gemini Startup Forum is part of our global Gemini Kit suite of resources. We're also accelerating the development of eligible AI startups by providing them with up to \$350,000 in Cloud credits, which they can use across a broad range of Google Cloud services, along with hands-on API sprints, a multimedia library with training modules and learning materials, and access to Google AI Studio.
