Executive Summary: Russian President Vladimir Putin's busy early October schedule included the Valdai Discussion Club's annual meeting, the Tsentr-2026 military exercise, the Commonwealth of Independent States summit in Turkmenistan, and a phone call with U.S. President Donald Trump.

- This flurry of diplomatic and military activity produced few tangible gains as Russia confronted persistent economic and battlefield pressures. At Valdai, Putin warned that Russia would defend its Kaliningrad exclave with all available weapons, implicitly including nuclear weapons, in the event of an attack.
- Putin's meetings with post-Soviet leaders and Iranian President Masoud Pezeshkian produced few tangible benefits. The preliminary U.S.-Russia diesel arrangement may offer Moscow some economic relief, but increased exports could further strain Russia's already tight domestic fuel supply.

Early October was an extraordinarily busy time for Russian President Vladimir Putin. He started with the traditional session at the Valdai Discussion Club's annual meeting, proceeded to the Center-2026 military exercise, and then departed for the Commonwealth of Independent States (CIS) summit in Turkmenistan, during which he made time for a phone conversation with U.S. President Donald Trump. He also marked his 74th birthday, reaching the age when former General Secretary of the Communist Party of the Soviet Union Josef Stalin died, causing a chaotic succession struggle (The Moscow Times, October 8). Putin is keen to demonstrate that his physical health is a guarantee of the stability of his system of power, even at his advanced age (Re: Russia, September 29).

The Kremlin claimed that "the whole world awaits" Putin's presentation for the Valdai Club annual meeting. While his speech generated international coverage, most of it focused on his warnings over Russia's Kaliningrad exclave and nuclear weapons (Rossiiskaya Gazeta, October 1). Valdai reduced the size of its annual conference and moved it from Sochi to Moscow because of security concerns, denying participants the opportunity to witness a fire from a tanker hit by Ukrainian naval drones (Meduza, October 7). In his remarks, Putin did not dwell on Russia's war-depressed economy and the newly constructed state budget draft for 2027, which brings more taxes and cuts to social programs (Carnegie Politika, September 29). The primary point in Putin's mass of platitudes that attracted international commentary was his declaration of readiness to counter supposed European threats to Russia's Kaliningrad exclave (Novaya Gazeta Evropa, October 3). Putin made a clear nuclear warning without explicitly threatening to launch a strike (Radio Svoboda, October 1; The Moscow Times, October 2). Hawkish Kremlin-aligned pundits then rushed to elaborate on the need to restore the credibility of nuclear deterrence by conducting tests and building up Russia's arsenal of short- and medium-range missiles with nuclear warheads (RIAC, October 8).

The missile launches will likely reinforce the nuclear message during the annual strategic-forces

exercise, usually held in late October (Nezavisimaya Gazeta, October 8). The Tsentr-2026 military exercises, which Putin supervised the day after his Valdai performance, envisaged no nuclear escalation and were designed to demonstrate a mix of traditional and innovative combat operations (Kommersant, October 2). Russian top brass were eager to show the range of new weapon systems and technologies that underpin the Kremlin's claims of steady territorial gains in its war against Ukraine (Izvestiya, October 2; Rossiiskaya Gazeta, October 5). Russia's relentless attacks are yielding relatively small territorial gains, and primarily on the axis toward Kramatorsk-Slovyansk. Ukrainian forces are exploiting this concentration of enemy troops for counter-attacks in other directions, particularly toward Lyman between the Donetsk and Luhansk oblasts (Meduza, October 5). New Ukrainian air defense systems are blunting Russia's edge in long-distance strikes gained through newly developed Geran-5 jet-propelled drones and Banderol S-8000 cruise missiles. Ukrainian strikes continue to breach the multi-layer defenses around Moscow, and have reached as far east as the Omsk refinery in Western Siberia (The Insider, October 8).

The leaders of the CIS member-states are perfectly aware of Russia's financial and military troubles. The habitual pomp of the Turkmenistan summit could not camouflage the disinterest in scaling up cooperation with Russia (KP.ru, October 8). Turkmenistan's choice to acquire Akash surface-to-air missiles from India, similarly to Tajikistan, signified that Russia's plan for building a joint air defense system covering the whole of Central Asia is not actively being implemented (Rossiiskaya Gazeta, October 2). One of Putin's meetings at the CIS summit was with Iranian President Masoud Pezeshkian as he seeks to cultivate ties without providing any material aid to Iran (RBC, October 10). According to the pro-Kremlin *Kommersant*, Putin's meeting with Pezeshkian was rescheduled, possibly to accommodate his phone call with Trump (Kommersant, October 10).

Mainstream commentators trumpeted the agreement on exporting Russian diesel to the United States as a breakthrough (Izvestiya, October 10). Russian media's concern about Trump signing new sanctions into law on September 18 has been replaced with hopes for softening the sanctions regime (RIAC, September 22; Expert.ru, September 25). Within pro-Kremlin Russian media, only a few radically jingoist voices have warned about the fragility of the diesel deal. External experts have expressed doubts in Russia's ability to deliver even moderate volumes of diesel on the world market (TopWar.ru; Forbes.ru, October 10). The prohibition on exporting diesel and other oil products, which the Russian government partially lifted, was aimed at mitigating the worsening domestic fuel crisis (The Bell, October 10).

In the first days of October, Ukraine delivered a series of strikes on Russian energy infrastructure, including on a pipeline hub in Samara, a refinery in Omsk, and an oil terminal in Rostov-on-Don. The Kremlin may claim that it can only deliver on its U.S. diesel deal if Ukrainian strikes are stopped (Kommersant; The Insider, October 10). Ukrainian President Volodymyr Zelenskyy has agreed to stop the devastation of Russia's oil industry if massive Russian attacks on Ukrainian energy infrastructure are also discontinued, but Putin has not agreed to this offer (Radio Svoboda, October 11). The talks on bringing the war to an end that showed some promise in recent weeks thus seem poised to stall (Novaya Gazeta Europe, October 10).

Putin may believe that he has caught fresh wind in the sails of his rotting gunboat, but his war course still goes through a sea of deep troubles. The emptiness of his Valdai discourse was instantly obvious, and it will take only a little time to expose his inability to make even a slight difference in the world energy markets. Zelenskyy, for his part, said Ukraine would organize elections if Russia agrees to a 60-day truce (Meduza, October 11). In combination with Ukraine's innovative combat tactics and upgraded strike capabilities, this diplomatic flexibility indicates Kyiv's resilience is sufficient to overcome further vicissitudes.
