

The Gemini app is now available for Windows

10.9.2026 - Erin Pettigrew | Google Italia

The new Gemini app for Windows lets you access AI help with a simple keyboard shortcut, directly from your desktop.

Today, we're launching the Gemini app for Windows. Designed to work seamlessly alongside your favorite tools and daily applications, the new desktop app gives you instant assistance without breaking your flow.

Here are three ways you can use the Gemini app on your PC:

1. Access Gemini instantly with a keyboard shortcut.

Press Alt + Space on your PC at any time to open Gemini over your active work. Whether you need a quick fact-check on a document or a few catchy title ideas for a presentation, you can get the help you need and jump right back into your workflow.

2. Power through deep work in a dedicated workspace.

Inside the new app, you can access everything you use Gemini for already. Hand off multi-step tasks to Gemini Spark ¹, your 24/7 personal AI agent, or ask Gemini to draft a project summary by pulling information directly from your Google apps like Gmail and Google Drive.

3. Create images and videos.

Bring creative concepts to life directly from your desktop. You can generate custom images with Nano Banana for a presentation, direct a high-quality video with Gemini Omni ¹, and best of all you can do it all in one convenient place.

Lightweight and quiet, the app runs without slowing down your PC. This is just the beginning for the Gemini app on Windows, with more native desktop capabilities rolling out over time. The app is available today globally for Windows 10 and 11. Download the app at gemini.google/desktop.
